# EIGHT BELLS at a glance 1/3

#### **Our Company**

Eight Bells (8BELLS) is a 4-years old **SME** based in Nicosia, Cyprus. In 2020 8BELLS established **a new branch** in Athens, Greece.

Delivers customizable solutions that enhance existing communication technologies relevant to **5G**, **Cloud Computing**, **Internet of Things**, **Cybersecurity**. Specializes **also** in modelling and analysis for businesses.

Has participated in more than 20 EU and national projects that have attracted more than €4 million.

Preparation, Execution, Management of R&D projects (mainly H2020), analysis, and quantification of results. Business and Technical Consulting.

# EIGHT BELLS at a glance 2/3

#### **Research Expertise & Consulting Services**

Customizable solutions that enhance modern communications relevant to the area of 5G Mobile Technology

5G communications

Knowledge on Network Function Virtualization (NFV) and management solutions for Cloud infrastructures.

NVF Cloud service

Portfolio of cybersecurity solutions that can be used for risk assessment, cyber-hygiene, anomaly detection, and threat remediation.

Cybersecurity solutions

Delivers special advisory services in ICT that help clients understand the market dynamics and profit from the ever-changing landscape. Advise and support other companies and organizations in every step of the process.

Advisory services

Business consulting includes also innovation management, technology transfer and exploitation (including market analysis, patenting, licensing, etc.).

Consulting

# EIGHT BELLS at a glance 3/3

#### **Technical Capabilities**

Systems & Networks engineering: including design, implementation and integration.

Cloud Computing and Everything-as-a-Service: design, deployment and maintenance of cloud computing infrastructure, etc.

Privacy, Security & Data Protection: Cybersecurity Gap Analysis, Virtualized Cybersecurity, Privacy Impact Assessment, Privacy-by-design architectures.

Software development: for 5G security, wireless network security, software quality assurance, machine learning applications, data analysis and visualization, cloud computing, etc.

Dissemination, Communication and Exploitation Activities.

Ethical and legal compliance activities for various projects, including compliance to the GDPR.

#### Our Projects

**EMed** 

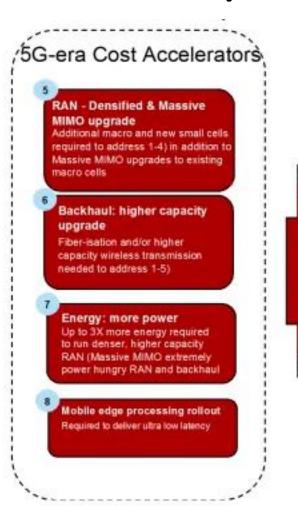

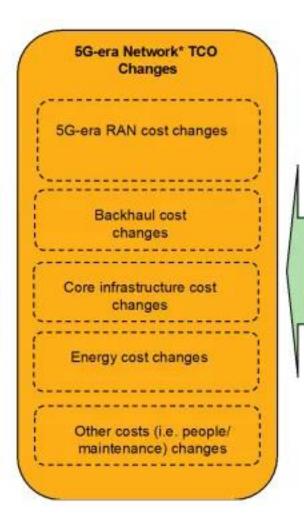

#### 5G-era network cost optimization

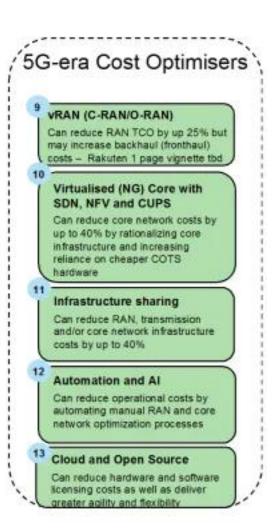

# 5G-era TCO Drivers 1 5G spectrum choices 5G networks in >3Ghz require denser RAN due to signal propagation limitations in urban and/or indoor contexts

- Capture and monetize new use cases with high capacity, high throughput, low latency, higher reliability 5G network; or
- b) targeted capacity backfill, existing use cases & eMBB
- 5G deployment choices
- a) Fast paced, high capacity 5G rollout; or
- b) measured deployment in urban capacity hotspots
- Mobile data traffic growth

2018 - 2025 data traffic CAGR ranging 20-50% -2025 traffic that is 3-17X bigger than 2018

#### Affordable 5G in a nutshell

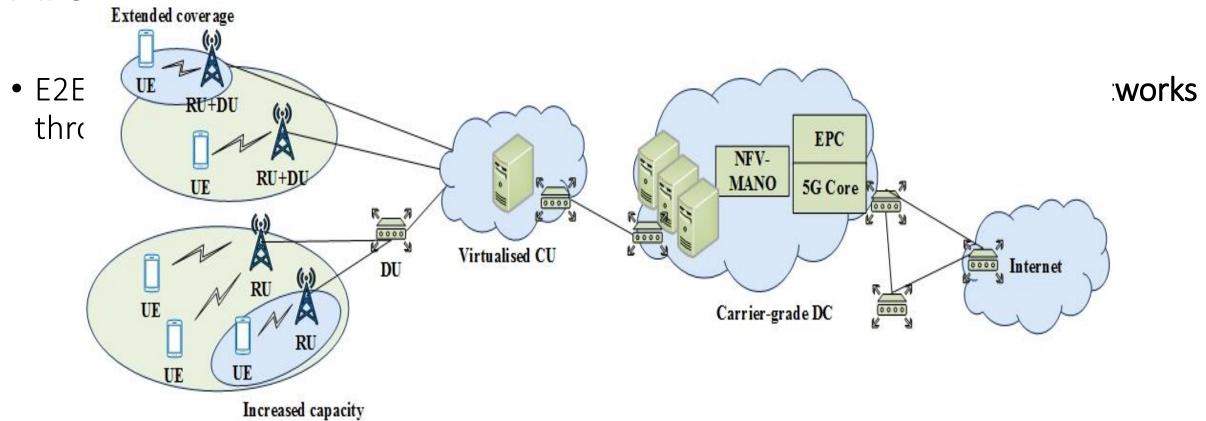

- ✓ Affordable 5G will deliver a complete and affordable 5G offering for private and enterprise networks, evaluated and validated in vertical use cases
- ✓ Support of Mobile Virtual Network Operators (MVNOs) to enter 5G new market and provide ubiquitous and high QoS 5G communication
- ✓ Affordable 5G will be fully exploitable and open by adopting RAN functions on open interfaces and standard hardware platforms to bring a variety of affordable solutions to the market

#### Architectural building blocks

# Affordable approach

- ✓ Cell densification
- ✓ Remote Unit (RU)/Distributed Unit (DU)/Central Unit (CU) split
- ✓ Hardware acceleration (FPGAs, GPUs)
- ✓ Edge computing and core network virtualization, seamlessly combined with the adoption of open solutions: O-RAN, MEC (Mobile Edge Computing) and open source MANO (Management and Orchestration), for cloud-native, micro-service deployments
- ✓ The solution will be evaluated and validated in three vertical pilots

#### Objectives

- Objective 1 Optimize 5G Hardware Elements
- Objective 2 5G Dimensioning for dense deployments
- Objective 3 Address Network sharing strategies as cost-savings
- Objective 4 Consolidate the usage of Open Platforms
- Objective 5 Validation & Evaluation
- Objective 6 Business Sustainability & Competitive Advantage

# Optimize 5G hardware elements

- ✓ Affordable5G aims at the optimisation of the hardware of the devices forming its cost-efficient and high-performance network
- ✓ Field-Programmable Gate Array (FPGA)-based hardware acceleration
  is an ideal solution for the network's edge to ensure optimal
  performance and cost efficiency in the execution of specialised
  functions
- ✓ The objective is to adopt enhanced low-power Graphics Processing Units (GPUs) and hardware accelerators at edge Data Centres (DCs), where there are limitations, such as room space and heat dissipation

# 5G Dimensioning for dense deployments

- ✓ Affordable5G will integrate and enrich the available solutions (Core & RAN) of its SMEs with open-source solutions
- ✓ Investigate Time Sensitive Networking (TSN) as a strategy to enable connectivity with deterministic latency over 5G for private networks, addressing real market needs, such as 5G in Industry 4.0
- ✓ Develop cost-effective wireless backhauling technologies that support 5G small cell requirements, while providing an integrated management and control plane for both wireless backhaul devices and small cells

#### Address network sharing strategies as cost savings

- ✓ Develop sharing strategies comprising diverse users, service providers and network operators for reduced ownership costs
- ✓ Study neutral host strategy and its implications
- ✓ Enhance existing network sharing solutions in two directions:
  - oThe Affordable5G management plane will enable the dynamic deployment of per-tenant customized slices with minimal operational costs
  - Develop isolation mechanisms at the various levels of the 5G network, including the radio access, which are key to define enforceable Service Level Agreements (SLAs) towards prospective tenants

# Consolidate the usage of open platforms

- ✓ Adopt open interfaces & platforms, enhanced for radio (O-RAN), edge (Akraino, OpenNess, edgeX foundry), cloud-native network management (OSM, ONAP) and optics core (ONOS, ODTN)
- ✓ Affordable5G aims not only to strengthen the use of open-source solutions in these distinct network areas, but to jointly use them into an overall open-source 5G network architecture

#### Validation and evaluation

- ✓ The project's outcomes will be evaluated in heterogeneous environments, comprising diverse RAN units, network resources, edge hardware and user requirements, as well as virtualized networks elements to demonstrate their wide applicability in 5G commercial and hybrid infrastructures
- ✓ The added-value and effectiveness of the project's outcomes will be demonstrated in three 5G pilots promoting cost efficient roll-outs of private networks

Project Objectives (6/6):

#### Business sustainability and competitive advantage

- ✓ During the project's lifetime new business models, (e.g. cooperative business models) and the formation of new ecosystems for managing services and actors will be developed
- ✓ Affordable5G will create competitive advantages to SMEs, facilitating them in their commercialization paths and strategies
- ✓ Results will be disseminated through contributions to 5G standardization bodies and open-source communities

# **Expected Impact**

- ✓ Support to the emergence of a European offer for new 5G core technologies
- ✓ Support to the emergence of new actors in the related markets
- ✓ Creation of high-tech start-ups or of new business opportunities for established SME's
- ✓ Strong SME participation is targeted

### Project pilots

1. Emergency communication critical services system (MC-PTT, MC-Video, MC-Data)

2. Smartcity Edge and Lamp post IoT deployment

3. Industrial/manufacturing private network

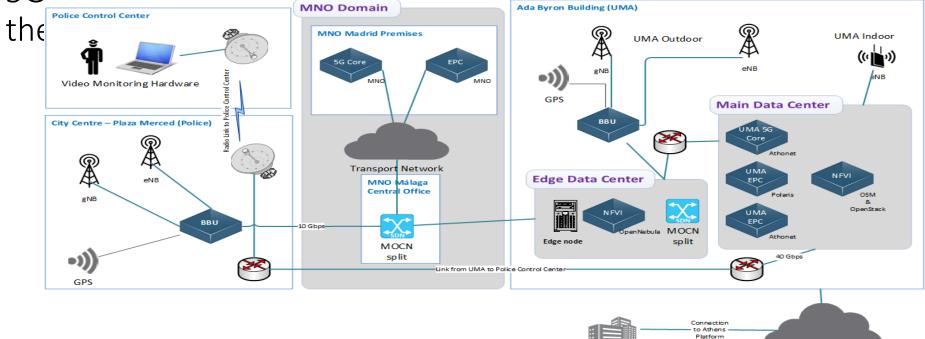

# Available 5G Testbeds 1/2

• 5GENESIS Málaga node (Spain)

✓ 5G nlatform denloved at UMA campus and connected to the Málaga city in

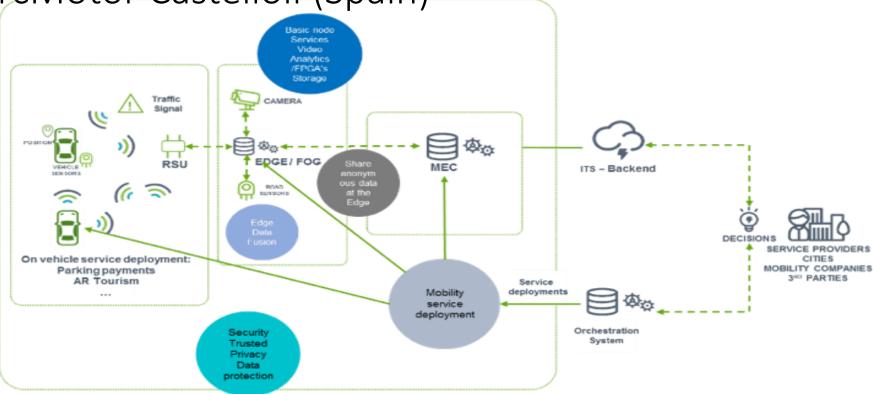

GÉANT

#### Available 5G Testbeds 2/2

• Circuit ParcMotor Castellolis (Spain)

#### **Project Partners**

#### 8BELLS contribution

- ✓ Description of the planned use case scenarios
- ✓ High-level architecture and system level technical specifications
- ✓ Contribute to technical activities using a variety of open source tools for cloud and network monitoring, Open Source MANO for NFV management and traffic generators
- ✓ Development and execution of viable plans for the communication, dissemination, and exploitation activities
- ✓ Technoeconomic and market analysis for the innovative Affordable5G

George Kontopoulos, Telecom & 5G Domain Director
